

SUN-SHIELD

The chariot can function as a home-away-from-home for the Robinsons. Side storage compartments are topped by cushions to make seats or beds, curtains surrounding the inside will allow privacy for sleep or just changing clothes. The chariot features heat and air conditioning to provide comfort in most kinds of weather.

However, unlike the spaceship, which is insulated from the most extreme of weather, the chariot can protect the family only from Earth type temperatures. Should the temperature fall too far below zero or rise too high the sun-shield will be required. This shield is created from a unique material which will reflect heat in the summer and absorb heat in the winter. It can keep the family and chariot 30 degrees cooler or warmer than outside.
