

LASER WEAPONS

The spaceships arsenal contains a number of weapons in several styles. The laser gun comes in two styles, a low power model pictured above and a silver bodied high powered gun. There are a total of eight laser guns aboard, four of each type.

Three models of laser rifles are also available; a black low powered type (pictured with Major West on page 9 ) and a silver model of medium power. There are four of each of these rifles stored aboard the ship. The final type of rifle is a very slender, silver, high powered model. This rifle is so powerful it could cut through the hull of the spaceship like butter so only two of these weapons are provided.
